

2) *Isolating & Activating* the Magic from Your Blood

First, the physician draws about 2 teaspoons of blood.

Then, using a centrifuge, the physician isolates platelets from that blood (platelet-rich plasma or PRP)

all within about 10 minutes in the office

Then she activates" those platelets to cause the release from the platelets of at least 8 growth factors

that would normally be used to heal injured tissue.

These growth factors work like magic to create increased collagen & new blood flow. To rejuvenate new

skin, these growth factors must be put back into your face.

(3) Injecting the Magic into Your Face

Vampire Facelift. Vampire Facelift

Using numbing cream and a very small needle (for almost no pain), the physician injects the woman's **own growth factors back into her face** in a particular way. **These growth factors then activate** multipotent stem cells already in the skin (tricking them into thinking" there's been an injury and new **younger tissue** should be generated).

(4) Recovery & Maintenance with the Healing & Regeneration
